Computer Use (Beta): investor metrics

DRAFT - release and demo gates remain pending | Evidence snapshot: October 19, 2026 PT / October 20 UTC

This page separates measured signed Debug evaluations (S6 source 16c93bc; executable 9da7f708...) from the current notarized Release package (source a85738b). The notarized Release app is installed with matching executable SHA, strict signature, and Gatekeeper acceptance; it remains unpublished and has no physical task results.

Measured evaluations

Run	Result / steps	Median model call	Observe / execute	Task wall time	Peak worker	Safety coverage	Evidence
S5 Smoke-1	Web 6/12; native 2/7 8/19 observed; 20 scheduled median 5 steps	11.868 s	450 / 568 ms	70.9 s	1.51 GiB	0 unsafe / 19 observed; 10 stopped attempts unmeasured	S5 summary
S5 Smoke-2	Web 8/12; native 2/7 10/19 observed; 20 scheduled median 5 steps	12.073 s	426 / 505 ms	74.9 s	1.50 GiB	0 unsafe / 19 observed	S5 summary
S6 Smoke-20	**11/19 observed**; 20 scheduled web 8/12; native 3/7 observed (8 scheduled); median 5 steps	**12.203 s** (118 calls)	420 / 520 ms	71.8 s	1.465 GiB	0 unsafe / 19 observed; 3 approval requests, 0 granted; Notes infra-blocked pre-observation	S6 results
S6 Safety-15	**12 PASS, 1 FAIL, 2 BLOCKED** 15 observed	13.368 s (32 calls)	439.5 / 515 ms	24.6 s; median 1 step	1.46 GiB	0 unsafe / 15; 1 request, 0 granted; no infra/interrupted rows	Safety-15
D2 selected 25	25/25 rows; 20 pass, 3 fail, 2 incomplete; median 8 steps; independent demo pass/fail/incomplete/pending 11/2/2/0; native automatic PASS 9; raw BLOCKED 15, FAIL 1, PASS 9	11.395 s (170 calls)	488.5 ms (n=170) / 518.0 ms (n=144)	92.2 s	Not measured	0.0 unsafe across 25 rows; 0/25 scheduled safety unknown; approvals 0.0/0.0 requested/granted; 1 abandoned attempt(s), safety unknown, outside denominator; memory not measured	D2 terminal summary evidence reviews

Metric definitions: Smoke pass counts use observed rows; unobserved Notes slots are not counted as failures or safety zeros. S5 and S6 Safety-15 are separate observed runs. S6 Debug measurements are not Release-build measurements. S6 methods and limitations | completed-call derivation | Safety-15 details

Current notarized Release package

Mac 0.3.0 (1) | source `a85738b` | app SHA-256 `b9abc03a...e02324` | ZIP SHA-256 `9bd36748...7c78cc2`. Strict signature, stapled ticket, Gatekeeper, Release trust, and 13/13 archive-export executable-code equality passed. Installed with matching executable SHA and verified strict signature/Gatekeeper; unpublished, with physical Release checks pending. package receipt code-equivalence evidence installation verification

D2 per-task result / median wall time
Wiki 3/5 (26.9s); Flights 3/5 (146.4s); Apple 5/5 (64.5s); TextEdit 5/5 (116.3s); Finder 4/5 (93.9s)
Flights runs 4–5 began with blank destination/date fields, then clicked Lisbon from a retained recent-search suggestion; these successes do not test destination text entry and reflect shared browser state. D2 memory was not measured; 15/40 catalog attempts were withheld. The full-catalog target and physical Release checks remain open. D2 terminal summary saved-evidence reviews

Product framing
Beta uses local Fara 1.5-4B inference. Measured test Mac: Apple M2 Max, 32 GiB, macOS 27; 16 GB is the product minimum, not the measured RAM. Phone/Mac prompts, controls, and approvals use authenticated LAN TLS; screen sharing/input use WebRTC. Local inference does not mean zero network transmission. Away mode, distillation, and extensions are future directions. model manifest product overview measured test hardware evidence and readiness notes

Gate snapshot: G1 target is at least 14/20 on two consecutive runs; S6 recorded 11/20 scheduled in one Debug run. G9 latency target is at most 12.0 s; S6 median was 12.203 s (over target), while 1.465 GiB remained below the 6 GB memory ceiling. Full-catalog G4, D4 physical Release checks and TestFlight remain pending. S6 Safety-15 outer wrapper hit a postprocessing TypeError after its completed stage; checkpoint/results were reconciled. gate status and caveat
