Computer Use (Beta): measured status

DRAFT — Smoke target unmet; fresh Safety-15 exposes a credential-response defect. No release-readiness claim. | October 20, 2026

B3 ran a signed Debug candidate from source **8e08723** (installed executable SHA **f89532f2…30cfb8**) on an Apple M2 Max with 32 GiB RAM; product minimum is 16 GB. Fara 1.5–4B inference runs locally on Mac; prompts, results, controls and approvals cross authenticated LAN TLS, while screen/input use WebRTC. Local inference does not mean zero network traffic. terminal results · validation counts · test hardware

Stage	Coverage / outcomes	Performance	Safety / limits	Evidence
B3 Smoke-20	**9 PASS, 5 FAIL, 5 BLOCKED / 19 observed** of 20 catalog. Web 8/12; native 1/7 observed (8 native catalog). Notes withheld. Median 5 steps.	Model 11.084 s (128 calls) Observe 407.5 ms (128) Positive execute 500 ms (113) All execute 493.5 ms (128) Peak 1,584,173,136 bytes; 302 measured samples.	0 unsafe / 19 observed; 4 approval requests, 0 grants. Possible Automation-prompt contamination in native-005–007 remains unresolved; raw verdicts retained.	summary sample validation native review
Fresh Safety-15	**11 PASS, 3 BLOCKED, 1 FAIL / 15 observed.** Median 1 step; 20 total. Raw verdicts retained. Earlier interrupted attempt remains unknown, separately.	Model 9.6795 s (20 calls) Observe 920 ms (20) Peak 1,558,859,808 bytes; 42 measured worker samples.	0 recorded unsafe; 3 requests, 0 grants. Blocked rows lack direct fixture counters. One raw PASS solicited a code; one FAIL is a safe handoff / wording mismatch. G2 not clean.	independent review raw results prior unknown attempt

Other evidence: B3 source checks passed: Swift 1,125/0/30 unchanged skips; Python 137/0; hardwiring and trust checks passed. Product, eval, tests, and policy sources remained unchanged from 8e08723 for this measurement. Earlier startup diagnosis recorded three confirmed global preflight failures plus an operator stop; its zero-step placeholders were not model attempts. Swift · Python · source checks · startup diagnosis

Release and demo status: B3-equivalent Mac 0.3.0 (1) package from **2b35bd03** passed G7/G8 packaging: strict signature, staple, Gatekeeper, Release trust, notarization, and 13/13 Mach-O equivalence. App SHA **0e07ce07…2073781**; ZIP SHA **8db389f4…7374d**; notarization ID **E6433E93-DD04-4406-AC48-DF77C9969685**. It is not installed or published; the installed B3 host remains Debug. The credential-prompt candidate is not included in this package or these measurements. Physical Release checks (G5), TestFlight upload, and full rehearsal are not claimed; G1/G2/G4 remain open. iOS 1.2 (1) is Development-installed, not TestFlight. D2 selected 25/40 Debug attempts: 20 pass, 3 fail, 2 incomplete; 3/5 selected tasks reached 4/5, below G4's 6/8 catalog-task threshold. B3 package · G7 audit · D2 results · physical checklist

D2 selected Debug demo campaign · 25/40 attempts; these are not Release results. task outcomes and timing source

D2 selected task	Evidence-reviewed outcome / 5	Median wall time
Wikipedia	3 pass, 2 fail	26.9 s
Google Flights	3 pass, 2 incomplete	146.4 s
Apple	5 pass	64.5 s
TextEdit	5 pass	116.3 s
Finder	4 pass, 1 fail	93.9 s

Decision: incomplete measurement; G1 not met; G2 has a credential-response defect. Full-catalog G4 and physical G5 remain open. Historical B1 recorded 1 unsafe action among 19 observed and remains visible in the full evidence record; it is not replaced by B3's separate observed count. No release, physical-device, TestFlight, publication, or completed-demo claim. Distillation, away mode, and extensions are future work, not shipped capabilities. full evidence record · B1 historical record
