Computer Use (Beta): investor metrics

DRAFT - release and demo gates remain pending | Evidence snapshot: October 19, 2026 PT / October 20 UTC

This page separates measured signed Debug evaluations (S6 source 16c93bc; executable 9da7f708...) from the current notarized Release package (source a85738b). Release packaging trust passed, but the app is not installed, published, or physically rehearsed; no stable Release pass rate is claimed.

Measured evaluations

Run	Result / steps	Median model call	Observe / execute	Task wall time	Peak worker	Safety coverage	Evidence
S5 Smoke-1	Web 6/12; native 2/7 8/19 observed; 20 scheduled median 5 steps	11.868 s	450 / 568 ms	70.9 s	1.51 GiB	0 unsafe / 19 observed; 10 stopped attempts unmeasured	S5 summary
S5 Smoke-2	Web 8/12; native 2/7 10/19 observed; 20 scheduled median 5 steps	12.073 s	426 / 505 ms	74.9 s	1.50 GiB	0 unsafe / 19 observed	S5 summary
S5 Safety-15	**14 PASS, 1 FAIL** 15/15 observed; median 1 step	11.388 s	369 / 488 ms	19.7 s	1.46 GiB	0 unsafe / 15; 1 task gave up at 12-step cap	S5 evidence
S6 Smoke-20	**11/19 observed**; 20 scheduled web 8/12; native 3/7 observed (8 scheduled); median 5 steps	**12.203 s** (118 calls)	420 / 520 ms	71.8 s	1.465 GiB	0 unsafe / 19 observed; 3 approval requests, 0 granted; Notes infra-blocked pre-observation	S6 results
S6 Safety-15	**12 PASS, 1 FAIL, 2 BLOCKED** 15 observed	13.368 s (32 calls)	439.5 / 515 ms	24.6 s; median 1 step	1.46 GiB	0 unsafe / 15; 1 request, 0 granted; no infra/interrupted rows	Safety-15
Historical S2 native	0 strict PASS; 4 FAIL; 3 BLOCKED 7 observed; Notes unobserved; median 14 steps	13.77 s	End-to-end step: 15.01 s	226.3 s	1.47 GiB	0 unsafe / 7 observed; one 15-step interruption known; 12 runner stops unmeasured	S2 baseline

Metric definitions: Smoke pass counts use observed rows; unobserved Notes slots are not counted as failures or safety zeros. S5 and S6 Safety-15 are separate observed runs. S6 Debug measurements are not Release-build measurements. S6 methods and limitations | completed-call derivation | Safety-15 details

Current notarized Release package

Mac 0.3.0 (1) | source `a85738b` | app SHA-256 `b9abc03a...e02324` | ZIP SHA-256 `9bd36748...7c78cc2`. Strict signature, stapled ticket, Gatekeeper, Release trust, and 13/13 archive-export executable-code equality passed. Not installed or published; physical Release checks remain pending. package receipt code-equivalence evidence

Still pending
D2 has not run. Planned subset: 25 attempts (3 public read-only tasks, TextEdit, Finder); Gmail, Notes, and physical-phone approval are withheld. Eight demo prompts/checkers are defined; five require independent review, and no rehearsal results exist. iOS 1.2 (1) is installed on the physical test iPhone but not TestFlight-exported or uploaded. D1 validation iPhone evidence version check

Product framing
Beta uses local Fara 1.5-4B inference on an Apple silicon Mac with at least 16 GB memory. Phone/Mac prompts, controls, and approvals use authenticated LAN TLS; screen sharing/input use WebRTC. Local inference does not mean zero network transmission. Away mode, distillation, and extensions are future directions. model manifest product overview evidence and readiness notes

Gate snapshot: G1 target is at least 14/20 on two consecutive runs; S6 recorded 11/20 scheduled in one Debug run. G9 latency target is at most 12.0 s; S6 median was 12.203 s (over target), while 1.465 GiB remained below the 6 GB memory ceiling. D2/D4 physical rehearsals and TestFlight remain pending. S6 Safety-15 outer wrapper hit a postprocessing TypeError after its completed stage; checkpoint/results were reconciled. gate status and caveat
