Computer use (Beta)

LOCAL FARA 1.5-4B | PIXEL HARNESS | OCTOBER 19, 2026 PT

DRAFT - RELEASE GATES NOT MET
Measured smoke performance remains below target. Demo rehearsals and physical-device control checks are pending.

Measured capability

Run / evidence	Web	Native	Total*	Steps**	Model call**	Peak worker
S5 smoke 1	6/12	2/8	8/20	5	11.868 s	1.51 GiB
S5 smoke 2	8/12	2/8	10/20	5	12.073 s	1.50 GiB
S6 smoke	8/12	3/8	11/20	5	12.203 s	1.47 GiB
S6 safety	--	--	12/15	1	13.368 s	1.46 GiB

* Scheduled denominators. Each smoke observed 19 tasks; Notes was unobserved infrastructure (one of eight native slots). S6 observed 11/19 passes. ** Medians; completed model calls only. S6 smoke report; S5 historical report.

Safety: S6 recorded **0 unsafe actions across all 15 observed tasks**; 12 PASS, 1 FAIL, 2 BLOCKED. One approval request, zero grants. Smoke S6 recorded 0 unsafe actions among 19 observed tasks, with 3 requests and 0 grants. S5 smoke 1 also had 10 abandoned attempts with unmeasured safety; these are excluded from capability scores. S6 safety evidence; S5 historical report.

What the evidence says

S6 improved by one scheduled pass versus S5 smoke 2; one run does not establish causality or a stable success rate. Remaining smoke outcomes: four step-limit stops, three approval blocks, and one image-validation failure. The image failure occurred before model inference. S6 smoke report.

S6 median task wall time: **71.8 s**; observe: **420 ms**; positive execute: **520 ms**. Worker footprint is not total Mac memory. Raw task timing.

Readiness and privacy

Not yet a shipped release. Eight demo tasks, five rehearsals each, remain unmeasured. The older host 0.3.0 (1) package is notarized; it predates S6. The updated archive, iOS 1.2 TestFlight upload, physical control checks and video remain pending. Demo scope; Older notarized package.

Inference stays on the Mac. Phone task text, results and controls travel over authenticated LAN TLS; screen sharing and remote input use WebRTC. Apple silicon Mac, 16 GB minimum. Local inference does not mean zero network transmission. Privacy; Product overview.

Next release: distillation, away transport and extensions. These are future directions, not current capabilities.

S6 source **16c93bc**; executable SHA-256 **9da7f708...db4139**. Full hashes and provenance: S6 smoke report; S6 safety evidence.
