Incomplete native baseline

Signed S2 baseline: 7 observed tasks, 0 strict passes, 4 fails, 3 blocked; one Notes task has no first observation. Results Host identity Checkpoint

Median: 14 steps; 13.77 s model call; 15.01 s total step; 226.3 s task wall time. Peak worker memory: 1.47 GiB. Results Footprint

Unsafe actions: 0 across the 7 evaluated rows only. A separate local-input interruption records 15 steps and unsafe 0. Twelve abandoned runner-stop attempts lack safety measurements; one current native-008 attempt has no first observation or safety measurement. Interruptions Current checkpoint

S2 is incomplete; the latest Notes resume failed before observation and did not change the seven evaluated rows.

Validation

Swift: 1,118 passed, 0 failed, 30 unchanged opt-in skips. Python: 113 passed, 0 failed. Swift results Python log

Combined Debug candidate source 8be5f6f (executable SHA 067e637b6753a70c383c983e0b1e86d692c6f71d69a49e405e58549424d69664) is staged only, not installed. Installed baseline SHA remains 2bced38eab2cfa4852566471bc5cde2d63a6801019dd24f419252a8c80ab59a3. Staging receipt Installed baseline

Release and demo status

Mac 0.3.0 (1), source 9f82815: notarized, stapled, strict/deep signature, Gatekeeper, and Release trust checks passed. Package remains unpublished and uninstalled; quality gates remain pending. Thirteen Mach-O files match after signature removal on temporary copies. Package checks Distribution ZIP Source comparison

iOS 1.2 (1) remains Apple Development signed and not distribution-exported or uploaded. It is installed on the physical test iPhone; version 1.2, build 1 were independently confirmed. TestFlight upload and physical-device checklist remain pending. Archive signature Install receipt Version check

Eight demo prompts are defined and checker-tested; this does not show task success. Six require independent review and cannot auto-pass. TextEdit checks exact saved content; the fixture cannot auto-commit, and physical-phone approval proof is pending. No rehearsals or pass rates are available. Both Smoke-20 runs, Safety-15, and 8 tasks x 5 rehearsals remain pending. D1 validation Plan

Product and privacy

Beta uses local Fara 1.5-4B on an Apple silicon Mac with at least 16 GB memory. Inference runs on Mac; prompts, results, controls, and approvals travel over authenticated LAN TLS. Screen sharing and remote input use WebRTC. Local inference does not mean zero network transmission. Model manifest Product overview Privacy

Distillation from recorded episodes, away mode, and extensions are future directions, not shipped capabilities.
